About this demo bundle

The contents of this PDF are entirely fabricated. The bundle is provided to App Store reviewers so they can exercise every feature of the Explore file manager without having to manually populate test folders.

Folder layout

- **Photos** -- four sub-folders showing the lazy-loaded sidebar tree, including a **Mixed-Formats** folder that exercises PNG / GIF / WebP / TIFF / BMP / HEIC decoders. Several hundred small thumbnails will generate when you switch to a view mode.
- **Documents** -- this PDF, a Markdown file, a plain-text file, and a rich-text file. All four render in the right-hand preview pane.
- **Videos** -- short MP4, MOV, and M4V clips. The first frame renders in the icon view; Space opens Quick Look for inline playback.
- **Code** -- short Swift, Python, JSON, HTML and shell files. Useful for showing the "Details" view sorted by extension.
- **Music** -- short MP3 and M4A audio clips. The icon shows a generic music note; Space plays inline.

Suggested walk-through

1. Press **Cmd+N** to open a fresh window.
2. Click **Photos/Mixed-Formats** in the sidebar -- thumbnails stream in.
3. Press **Cmd+1..Cmd+4** to cycle through the four view modes.
4. Press **Space** on any image, video, or PDF to launch Quick Look.
5. Press **Shift+Cmd+G** and type a path (e.g. `~/Downloads`) to see the path bar in action.
6. Right-click any file for the context menu (open, duplicate, trash).
7. Drag a photo onto the Documents/ folder to see drag-drop move semantics.
